

High Voltage Busbar Insulating Tape (HVBT)

Description

TE Connectivity's (TE) Raychem HVBT tape is designed to give the integrity of a heat shrinkable tubing with the versatility of a wraparound product. HVBT is a heat shrinkable, adhesive-coated tape which provides insulation enhancement and protection against accidentally induced flashovers.

A single layer of HVBT tape, two-thirds overlapped, will provide AC voltage withstand (flashover protection) to at least 17.5kV increasing to 36kV if a second layer is applied.

Key Features

- Compatible with all TE's Raychem MV insulation enhancement systems
- Easy to apply, using readily available equipment
- Indoor and outdoor use
- Anti-tracking properties
- Continuous operating temperature up to 90°C (194°F)
- Versatile and flexible at temperatures as low as -40°
- REACH and RoHS compliant
